SONIC SOLUTIONS[®] LLC
Algae Control Without Chemicals!

SonicSolutions[®] ultrasonic algae control uses no chemicals and is safe for fish, plants, and other aquatic life.

It has been proven effective in tanks, ponds, lakes, reservoirs and successfully used at power plants, golf courses, botanical gardens, irrigations ponds, water and wastewater treatment plants, marinas, wineries and at many other personal and commercial installations. Using less than 10 watts of power usage it lowers pH and TSS. Units come in US, EU/UK versions, as well as, 24-volt versions to use with SonicSolutions[®] solar power supply units sold separately. NSF[®] models available. Power supplies are UL[®] and CE approved. Thousands of units are in operation worldwide.

GOLF COURSE

"We installed one of your SonicSolutions ultrasonic algae eliminators in our largest pond...we discontinued the use of chemical algaecides in that pond. Within a week or two after start up, the algae in the pond died. Since then, the pond has remained algae free. During this same period, we continued to treat our other ponds with the usual algaecides. It's fantastic that your SonicSolutions unit has kept the pond on the 13th the cleanest of our six ponds and has done so without the use of any chemical algaecides. I would be happy to provide a reference to potential SonicSolutions customers. I am very pleased that the SonicSolutions unit offers us a way to kill algae, and prevent its return, without chemicals."

POND

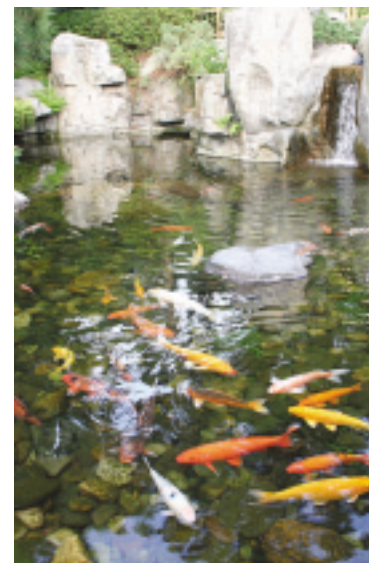

"I currently own a SonicSolutions Model SS-400, which has been in use since 2004. I am so pleased with your product that I feel compelled to share my positive experiences with you. This personal testimony is reflective not only of the quality of your product but also of the sincere satisfaction of this customer.

In 1987 I created a half acre pond on my property and stocked it with blue gill, bass, and Koi. The Koi were unable to adequately control an algae problem and so I resorted to using algaecides along with pond dyes. The cost of the chemicals and dyes ran about \$500 per year. However, I love my pond fish and I was not comfortable with the potential environmental impact of the algaecides that I was using. In 2004, though a tad skeptical, I did decide to try the Model SS-400 and to my delight the algae problem was solved and my SonicSolutions unit has been in operation ever since.

My fish have their spring babies and the heron comes and dines...keeping the fish population under control, while the marvelous SonicSolutions does its part for the algae. My pond is so beautiful that people driving by stop to take pictures of it and city folks who visit, and are loathe to swim in a country pond, jump right in.

My fish and I thank you for this most unique invention and wish you many years of future 'chemical to sonic' converts."

COUNTRY CLUB

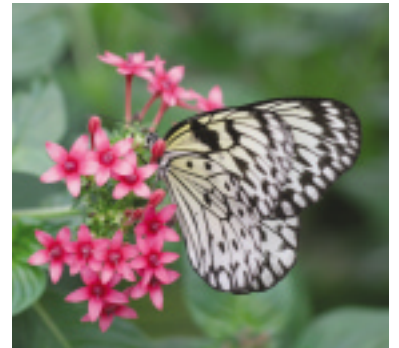

"SonicSolutions is a major component of our pond management strategy. For the past several years our irrigation pond has stayed algae free. SonicSolutions has helped us obtain certification status with the Audubon Cooperative Sanctuary Program."

Matthew Ceplo
Golf Course Superintendent
Rockland Country Club, Rockland, NY

BOTANICAL GARDEN

"We tested and subsequently purchased two SonicSolutions units for use in our irrigation pond and pump house tank. The result has been a great reduction in algae and the need for application of algaecides. The SonicSolutions units have performed well in controlling algae and have proved cost effective compared to the labor and chemical costs of our previous algae control efforts. Thank you SonicSolutions!"

MARINA

"On the 25th of July we installed a SonicSolutions Model SS-500 in our dock area. After just over two weeks the results in the immediate area were extraordinary with areas further out taking somewhat longer but eventually achieving the same result. The SonicSolutions system eliminated the algae while causing no harm to any of the fish and other wildlife in the area tested and our club was very pleased with the results."

Member, Willow Bank Yacht Club

POND

BEFORE

AFTER

"Well, we were all skeptical when we installed the unit into this Destine pond on April 1. The pictures show the Lyngbia matted densely at one end and a perimeter of the stuff around the edges. We checked the results of the device on April 15, and to our surprise this pond was perfectly clean. The bottom of the pond that was covered with mats peeling off the bottom was now a nice sand bottom; the large masses of Lyngbia floating on the surface were gone.

The pictures show the transformation quite clearly. We followed up with another check on May 5, which would be 30 days the device was in the pond and the pond was the same from April 15, no algae.

The results from the SonicSolutions device were truly very good. We have tried many new products over the years but this device really seems to be a useful tool in the war on algae. The device is very easy to install, only needs a 120V outlet, and is surprisingly small, so is not highly visible to the average passerby."

WASTE WATER TREATMENT PLANT

"Crikey! SonicSolutions not only cleaned up the blue green algae, it also cleaned up the shells of the turtles in the pond!"

GOLF RESORT

"I installed the SonicSolutions units when my ponds already had algae in them. I was completely surprised how quickly they killed the algae and helped to significantly lower my chlorophyll levels! Being in the warm climate of Puerto Rico, I wasn't sure they would work for me, but they succeeded far beyond my expectations!"

Gonzalo Vargas
